

Electronic Data Interchange Party Manager

"Automates Trading Partners Management"

Electronic Data Interchange (EDI) is one of the most common means today by which businesses exchange data electronically. EDI usage entails message syntax and standards (including ANSI X12 and UN/EDIFACT), messaging protocols and transports. Most of business-to-business integrations today involve multiple and agile trading partners. Consolidating and managing all trading partners simultaneously has been a major challenge.

'EDI Party Manager' developed by L&T Infotech shortens the time span to automate party creation and configuration settings from one central place. It enables users to manage trading partners and its associated data exchange.

EDI Party Manager (EPM) using BizTalk Server

Electronic Data Interchange (EDI) is utilized in about 75 percent of B2B (Business-to-Business) electronic transactions and is growing at about 5 to 7 percent per year. There are lots of EDI details involved in different party configurations, making it difficult for programmers to add and manage trading partners.

L&T Infotech's EDI Party Manager utility on BizTalk Server provides trading partner deployment and management services. This utility supports the creation of trading partner relationships and automates testing and deployment of those relationships through wizards. It reduces the implementation timeframe when migrating trading partners and their settings from development to testing and then to production environments.

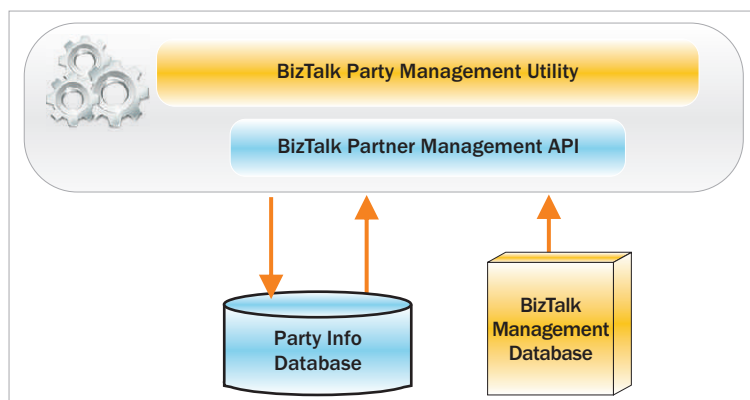

EPM is built on .NET Framework 3.5 that provides seamless integration with BizTalk Server. EPM uses BizTalk "EdiPartner Agreement Manager" APIs to communicate with BizTalk management database. It also uses party info database to store EDI group's information and to map the partners to an internal identifier. It utilizes an administration console as UI (User Interface) for managing EDI Parties.

Key Features

- Enables users to create, update and delete BizTalk parties and their associated data
- Enabled on BizTalk Server
- Party replication
- Grouping of parties
- Import/export party bindings
- Seamless integration with development, testing and production environments

Business Benefits

- Automates trading partners management
- Accelerates the process of EDI party management with larger vendor base
- Time required to create parties reduced by almost 80 percent
- Extends support to EDI standards - EDIFACT, X12

EDI Party Manager – Extends Support to EDI standards like EDIFACT, X12

Microsoft BizTalk Server Overview

BizTalk Server is a comprehensive end-to-end integration tool on Microsoft stack that can be used in conjunction with other components of Microsoft's 'Real World SOA(Service Oriented Architecture)' application platform. This allows organizations to implement service-oriented applications that connect and interoperate with a wide range of heterogeneous systems including LOB (Line of Business) systems, legacy systems, smart devices and trading partners.

The Road Ahead

Support for all kinds of EDI standards

Importing EDI party files option for legacy EDI party management systems

L&T Infotech Advantage

At L&T Infotech, we believe in becoming the thought partners for our customers, understanding their business as well as their technical needs to provide the most suitable solutions. We provide the winning edge to our financial services clients by deploying our transformational legacy modernization, analytics and testing capabilities for extracting fuller value from IT spend.

Our client base includes 7 of the top 15 global banks across USA, UK, Europe and Asia Pacific regions. We bring to them an inherent understanding of the business processes, business issues and technology issues that shape the banking and financial services landscape.

Our advantage includes:

- A wide spectrum of technology and domain partnerships
- Service offerings across the value chain
- Overwhelming customer experience across the domain

About L&T Infotech

L&T Infotech, one of the fastest growing IT Services companies, is ranked by NASSCOM as 8th largest Indian software & services exporter from India and is amongst NASSCOM's Top 20 IT-BPO Employers in India (FY2009-10). It is also ranked 7th in DATAQUEST-IDC top 20 IT Best Employers Survey 2010.
