## Delivering a sound methodology for SOA adoption

### BUSINESS BENEFITS

Robust, focused consulting services have helped the client to take the right decision and implement cost-effective, open-source software for SOA infrastructure. The suggested methodology is expected to enhance developer productivity and deliver future cost savings.

L&T Infotech worked helped an online entertainment provider re-architect major IT systems with Service-oriented Architecture (SOA).

### THE CLIENT

Our client is a leading online entertainment provider, based in USA.

### THE CHALLENGE

To address growing business needs, the client decided to re-architect its major IT systems with Service-oriented Architecture (SOA). We were the consultants for the selection of a technology platform for SOA realization. Since the customer had decided to begin SOA adoption by developing reusable business services, it also needed a sound methodology for the same.

### THE SOLUTION

Our consultant teams evaluated technology platforms from IBM, Oracle, BEA and JBoss vis a vis our client's requirements and finally recommended JBoss Application Server and its native web services stack. We also helped the client to select suitable technology for service-enabling its legacy system. Finally, we provided the methodology for developing reusable service offerings, customized for the technical environment of the client.

---

L&T Infotech is a 100% subsidiary of the US\$ 7 billion, technology-driven engineering and construction major, Larsen & Toubro. We offer comprehensive, end-to-end software solutions and services to leading companies across the globe. We provide the winning edge to our clients by leveraging our business-to-IT connect and deeply committed people.
