

Case Study

Hybrid Cloud Implementation for Leading European Insurance Provider

One of the largest European Insurance providers

Challenges

- The client wanted to deploy their core Insurance application ABS and its supporting applications on AWS, to act as backend for one of their leading banking customers for Insurance processing.
 - The backend insurance processing engine was a monolithic application (Java DB2). However, frontend customer facing modules were built-in microservices, and used APIs to communicate with ABS. All application deployments were expected to be automated.
 - As an Insurance company, our client is bound by various regulations and compliances. This includes a mandatory secondary DR site along with production and expected Recovery Time Objective (RTO) to be a maximum of 4 hrs and Recovery Point Objective (RPO) to be near zero.
-

LTI Solution

- We designed and built an AWS-Cloud architecture for the applications that include the Core Insurance application - ABS, based on well audited principles by leveraging microservices architecture.
- Cloud architecture was designed to deliver a fully scalable, flexible and highly available application environment for the client, while meeting the strict regulatory and compliance requirements of the Insurance Industry
- To ensure a seamless and highly automated Cloud environment, we implemented automation for application deployments and enabled Cloud features including auto-scaling and load balancing. Auto-scaling was enabled at service level and EC2 level to scale out microservices, based on load.
- The legacy Core Insurance application, along with other applications, were seamlessly migrated to the target cloud by leveraging our domain expertise of highly skilled cloud migration experts

Business Benefits

- **High availability and redundancy through cloud architecture ensured the application availability guarantee at 99.99%**
- **70% reduction in IT administration due to automation**
- **40% reduced time-to-market**

LTI (NSE: LTI, BSE: 540005) is a global technology consulting and digital solutions company helping more than 420 clients succeed in a converging world. With operations in 32 countries, we go the extra mile for our clients and accelerate their digital transformation with LTI's Mosaic platform enabling their mobile, social, analytics, IoT and cloud journeys. Founded in 1997 as a subsidiary of Larsen & Toubro Limited, our unique heritage gives us unrivaled real-world expertise to solve the most complex challenges of enterprises across all industries. Each day, our team of more than 30,000 LTItes enable our clients to improve the effectiveness of their business and technology operations, and deliver value to their customers, employees and shareholders.
