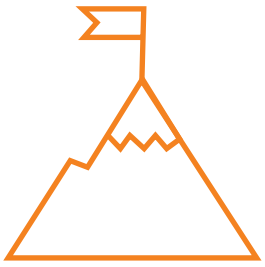
A Larsen & Toubro Group Company

Case Study

Cloud Security for Leading European Sourcing & Service Provider

Our client is a leading European sourcing and services provider offering electrical, heating and plumbing, ventilation and climate and energy solutions.



Business Challenges

- Devise enterprise level cloud security blueprint.
- Ensure real-time security monitoring and response of emerging threat, incidents.
- Ensure Cloud Defense SIEM deployment to protect environment form emerging cloud threat/attack and augment Lack active threat hunting.
- Operationalize XDR solution to detect and protect endpoint, identity, application, O365, Azure AD and Shadow IT applications from threat vectors.
- Automate security incident response with Next-Gen SOAR.
- Ensure enhanced cloud resilience with a cost optimized delivery model.

LTI Solution

1. Defined a roadmap upgrade enterprise level cloud security and implemented Active Cloud Defense solution.
2. Deployed Microsoft SIEM solution, ingested necessary logs, 3rd party technologies, Microsoft defender suite, Azure, O365, applications and Secure Data Lake solutions in cloud and ensured threat detection & correlation.
3. Deployed MITRE ATT&CK Use cases, SOAR, Playbook, Workbook, ITSM solution.
4. Integrated User Entity Behavior Analytics (UEBA) and Threat Intelligence (TI) with SIEM solution for enrichment of security incident detection & correlation; augmented threat prevention with active Threat Hunting (TH) capability to ensure proactive IoA/IoC detection.
5. Deployed & configured Microsoft Defender Suite for Identity, O365, endpoint, application/MCAS for protecting the endpoint, ensuring identity and access control on applications, detecting threat and managing vulnerability and security misconfiguration.
6. Deployed polices in Microsoft Cloud App Security (MCAS) to ensure Data Loss Prevention and Information protection.
7. Helped achieve Steady state and ensured cyber resilience with continuous monitoring seamless (24*7) support.

Defined Use cases and Playbooks

- Phishing
- Malware, threats
- Identity protection
- Suspicious User Activities
- Security Misconfiguration
- Threats & data loss protection on Application
- Data Breach
- Zero-day vulnerability
- Real-time access policy verification
- Credentials Compromise
- Safe link, safe attachment

Business Benefits

Improved Cloud Defense Posture

by implementing Active Cloud Defense Resilience blueprint; LTI solution ensured timely detection of shadow IoAs and IoCs, prevention from critical threats with Active Threat hunting capability coupled secured Data Lake ; Ensured protection of client endpoint, identity, O365, application, Azure AD with Microsoft defender suite deployment.

Enhanced Efficiency

Ensure real-time security monitoring (24*7) and automated response to security incidents and attacks with advanced correlation techniques; augmented efficiency by reducing mean time to detect respond and by correlation of data breach, and response by leveraging SOAR-led automation.

Optimized Operation

Optimized the security operations & costs, by reducing efforts on noisy of false-positive alerts with help of EUBA & contextual Threat Intelligence and automating repetitive manual processes with effective Playbook, Workbook design ITSM integration.

Ensured Security & Compliance

Assisted in meeting industry recommended compliance standard by deploying Cloud SIEM/SOC, Microsoft Defender suite.
